LedgerPilot AI

Stops wrong and fraudulent supplier payments before they go out.

An accounts-payable agent built on Evolus, running an open model on AMD GPUs.

AMD Developer Hackathon: ACT III · Evolus Business Agents on AMD

The problem

Invoices are still matched to purchase orders and delivery notes by hand.

- Overbilling: a higher price than agreed, units that never arrived, totals that don't add up.
- Payment diversion: a perfect-looking invoice asks for payment to a new bank account.
- Duplicates: the same invoice arrives twice, sometimes with a look-alike number.

How it works

Documents in, a routed decision out, with a person in charge.

1 Evolus extractors read the purchase order, goods-received note and invoice.

2 Python validates every field and runs the checks with Decimal maths.

3 Detective Clerk, an Evolus agent on DeepSeek-V4-Flash via AMD Token Factory, explains the evidence, cites the vendor master and proposes a route.

4 An Evolus AI Tool drafts the supplier query or fraud alert.

5 An Evolus workflow routes the case; a clerk approves or rejects.

What it checks

Every finding shows its code, the rule that fired and the amount at risk.

- Three-way match on price and quantity
- Arithmetic and tax
- Vendor master and bank details
- PO balance
- Exact and look-alike duplicates

Safe by design

The model explains. Code decides the money.

- Code does every number; the agent never recomputes one.
- The agent can make a route stricter, never looser, so it cannot approve fraud.
- No answer, or an unreadable value, sends the invoice to a person with the reason.
- The model never sees the full bank account.

Built to be checked

Open model on AMD, Evolus agents, and a test suite behind it.

217 offline tests and a Docker image built in CI

- Evaluation and benchmark scripts over 24 synthetic cases
- Demo mode that replays recorded runs, clearly labelled
- Python · Pydantic · Streamlit · SQLite · Evolus · AMD Token Factory

Thank you

LedgerPilot AI · team Bygest

Every invoice matched. Every risky payment stopped and explained.
